Available immediately | Transferable iqama | Arabic and English

Summary

Support engineer with 3+ years keeping university learning platforms running for 2,000+ users in Saudi Arabia: incident triage, API and log investigation, release testing and escalation to developers. Builds and self-hosts web apps on Oracle Cloud with Docker and GitHub Actions, and automates repetitive work with Python, n8n and AI agents. Seeking DevOps, cloud support, automation or application support roles.

Experience

Senior Onsite Support Engineer

2023 – Present

Digival IT Solutions · Jeddah, Saudi Arabia · University LMS platforms

- Supported **2,000+** students, faculty and staff at Tier 1 and Tier 2, keeping a **98%** satisfaction rating.
- Built an API-driven exam-readiness dashboard (JavaScript, Axios) for ~300 exam sessions a year that cut daily verification from **about 2 hours to under 5 minutes**.
- Ran UAT and regression testing before releases; reproduced auth and data-sync faults with logs, Postman and cURL and escalated **50+ defects** with the exact failing requests.
- Traced platform email delivery failures to queuing in the AWS email infrastructure and gave engineering the evidence to fix it.
- Wrote Arabic and English SOPs, runbooks and onboarding guides, cutting ticket response times by **30%**.
- Promoted from Onsite Support Engineer; supervised one support colleague and led user onboarding sessions.

Projects

TurnUp: realtime multiplayer games I run on Oracle Cloud with Docker Compose; GitHub Actions deploys, health checks, database backups and rollback. — React · Socket.io · PostgreSQL · Docker · GitHub Actions

sufyanfarooq.com: self-hosted portfolio. GitHub Actions runs tests and a Docker build, deploys over SSH to an Oracle Cloud VM running Docker Compose, then health-checks the live site. It also checks these apps every 5 minutes. — Node.js · Express · Docker Compose · GitHub Actions · Oracle Cloud · Linux

naqlapp (naqlapp.com): logistics website and Truck Dispatcher TMS: dispatch, fleet and driver assignment, delivery evidence, billing readiness. — React · TypeScript · Node.js · PostgreSQL

Riyasat: property management: agreements, payments, maintenance, reports, role-based access. — Next.js · TypeScript · Supabase

Mawarith: Islamic inheritance calculator with a typed engine and Arabic UI. — React · TypeScript

AI and Automation Projects

Bilingual voice booking agent: Arabic/English agent that answers enquiries, checks availability, books and reschedules via webhooks, and escalates to a human. — Vapi/Retell · OpenAI · n8n · REST APIs · Google Calendar

WhatsApp AI sales agent: qualifies travel leads from Meta ads, extracts requirements, looks up pricing and routes qualified leads to consultants. — n8n · OpenAI tool calling · WhatsApp Business API · Google Sheets

Health monitoring daemon: multi-threaded Python service that polls endpoints, records latency and status codes, and alerts with exponential backoff. — Python · SQLite · REST

Skills

DevOps and cloud
Linux (Ubuntu, systemd, cron, SSH), Bash, Docker, Docker Compose, Nginx with TLS, GitHub Actions, Oracle Cloud, AWS EC2

AI and automation
n8n, OpenAI API, tool calling, voice and WhatsApp agents, prompt design, Python, PowerShell, AI coding agents

Development
JavaScript, TypeScript, React, Next.js, Node.js, Express, PostgreSQL, MongoDB, SQLite, Git

Support and testing
REST APIs, Postman, cURL, log investigation, root-cause analysis, UAT, regression testing, runbooks

In training
Kubernetes, Helm, Argo CD, Prometheus, Grafana, AWS ECS/EKS; learning Terraform

Education

MBA
In progress, final year · expected 2027

Bachelor of Computer Applications
Osmania University, Hyderabad

100xDevs
Web development and DevOps course: Linux, Docker, Kubernetes, CI/CD, monitoring

Languages

Arabic · English · Hindi · Urdu
